

The U.S. Economy Exposed - DEBT CRISIS

THE U.S. ECONOMY EXPOSED - What Factors Caused the U. S. Debt Crisis and Who is at Fault? A look back in the history of economic downturns and the Political Party in Control! This book takes a look at the history of recessions since The Great Depression of 1929 and spans 80 years. During that time, we have fallen in and out of many recessions, but none deeper than The Great Recession of 2009. It takes a high-level look at the economy and the components of Gross Domestic Product (GDP), which measures the rise and fall of US prosperity. It also delves into the causes of the current debt crisis and identifies the party in control of Congress, who created this catastrophic hole that we are now in as a nation. We are a nation in disarray and some banks/corporations don't know what to do with their money in this economic environment, while the majority of Americans struggle to make ends meet with low disposable income or none at all. The challenge for the new Congress will be to develop plans that will release the excess money into the economy and put it to work to drive economic growth. This book attempts to answer the following questions: Which Party is at fault in creating the current debt crisis? Which Party is the right choice to lead us into the next decade? How long will it take to get us back to where we were prior to the collapse of the residential housing and financial markets? Which is the better Party to implement the right choices to complete the turnaround? The benefits of reading this book will: Help you to connect the dots with visual graphic, colorful representations of actual economic numbers; Assist you in making the right decisions about spending and your future; Put things in perspective for you in simple, easy to understand terms; Help you sort through the political propaganda being tossed over the airwaves. Numbers only lie when taken totally out of context, which is

exactly what happened during the election year. By taking a macroeconomic look at the economy, it should put things in perspective for you. Regardless, it takes two (Parties), and a whole lot of support from Congress, to tango. So, ACT NOW and click on the Book Cover to download this 50-Page Summary before you write-off the Peoples Choice.
